

THE STARS ARE RIGHT™

Invocation Symbol Counters

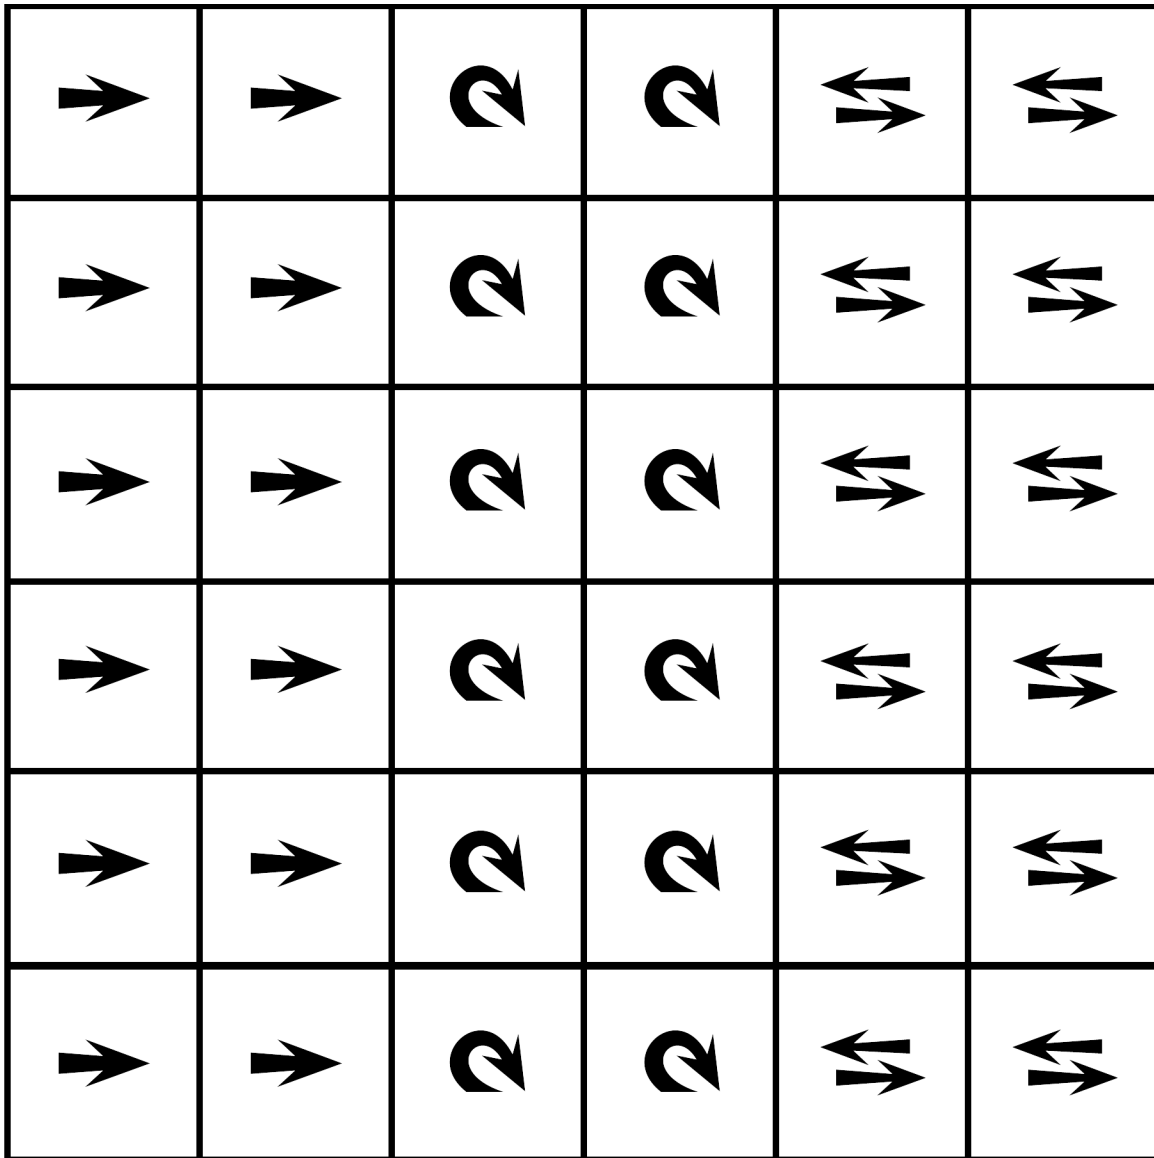

If keeping track of your flips, swaps, and pushes is driving you mad, use these counters for Invocation Symbols. This file has two versions: full Cthulhoid color, and starkly sane black and white. Print the one that best meets the needs of your cult . . .

There are 36 symbols – 12 of each type – which should be plenty. You only need one set for the whole game. Put them where everyone can reach them.

When you invoke a Creature (phase 1), take one counter for each symbol granted by the invoked Creature.

If your summoned Creatures allow you to change symbols (phase 2), swap your counters accordingly – for instance, if you get to change a Swap to two Flips, put a Swap back, and take two Flips.

When you Change the Sky (phase 3), return one counter to the pool each time you make a change. Remember that you have to use all your symbols! When you use your last one, this phase of your turn is over.

Cut out the 36 symbols on the black lines. If you want to be fancy, adhere them to cardboard before you cut them out. If you want to be mega-fancy, print out the sheet twice and make two-sided tokens.
